

RAHUL R

AI Engineer | LLMs & RAG Pipelines | Python Developer

+91 8610955329 • rahulrajenderan96@gmail.com • [GitHub](#) • [LinkedIn](#) • [Portfolio](#)

PROFESSIONAL SUMMARY

AI Engineer with 2+ years of experience delivering production-grade LLM systems, including RAG pipelines and agentic workflows. Specializes in scalable enterprise AI solutions using LangChain, LangGraph, OpenAI APIs, and OpenSearch for document intelligence and automation. Expertise in vector search, financial document processing, and OCR-based information extraction. Applies advanced AI to automate complex business workflows at scale.

TECHNICAL SKILLS

AI/ML Frameworks:	LangChain, LangGraph, DeepAgents, AGNO Agents
LLMs & GenAI:	OpenAI GPT Models, Prompt Engineering, Fine-tuning, RAG Pipelines, Mistral AI, HITL, Response Streaming
Search & Databases:	OpenSearch, Vector Search, SQL, MongoDB
Cloud & Infra:	Azure Functions, API Integration, Docker (Basic)
Languages:	Python, JavaScript (ES6+), C#, SQL
Web & Backend:	Flask, REST APIs, HTML, CSS
DevOps & Tools:	Git, GitHub, Postman, VS Code, Command Line/Shell

WORK EXPERIENCE

AI Engineer | Botminds.ai | Chennai

Feb 2024 – Present

- DeepAgents integration enabling autonomous multi-step AI workflows with HITL support, intermediate response streaming, and sub-agent orchestration for complex task decomposition.
- Designed and implemented LangGraph-based stateful agent pipelines supporting dynamic multi-turn reasoning and conditional branching across enterprise agent workflows.
- Azure Functions and LLM-based compliance workflows classifying 17+ input types, performing sentiment & emotion detection, identifying new vs. existing customers, and mapping customer IDs.
- Engineered large-scale document automation handling 200+ documents and 1,000+ pages — PDF chunking, text extraction, prediction-based splitting, and execution of 200+ business rules for client data integration.
- Built large-scale ETL pipeline synchronising heterogeneous data sources (JSON, Excel) with real-time processing and validation, significantly reducing manual document processing effort.

PROJECTS

AI Document Intelligence Agent | Python, LangGraph, OpenAI, FastAPI, React.js

2025

- Built a full-stack agentic system where users upload documents and interact via chat; the agent autonomously decides whether to extract, summarise, compare or query based on user intent.
- Implemented a LangGraph multi-step reasoning pipeline with tool-calling agents for document parsing, vector search via OpenSearch, and structured data extraction.
- Designed HITL checkpoints where the agent pauses for user confirmation before executing irreversible actions like bulk exports or data edits.
- Built a React.js frontend with real-time streaming responses using Server-Sent Events, giving users live visibility into agent reasoning steps.

Zero-Shot Voice Cloning | PyTorch, WaveNet, Tacotron2, Librosa, NLTK, SpaCy

2024

- Engineered a zero-shot voice cloning system replicating human speech with high accuracy using neural network architectures including Tacotron2 and WaveNet.
- Integrated Librosa for audio feature extraction and WaveNet for waveform synthesis, enabling efficient end-to-end speech generation.
- Applied NLTK and SpaCy for text pre-processing to build a clean text-to-speech conversion pipeline.

EDUCATION

M.Tech — Nanoscience & Technology

2021

PSG College of Technology, Coimbatore

CERTIFICATIONS

- Programming in Python Basics ,Coursera
